Meeting 1

- Add People to each of the items on the backlog
- Have at least one person on their story each week
- Every week each person will share their screen and show what they accomplished for the week.
- Every week you will tell plans for the next week
- Need project boards up to date
- Release Notes
  - Manual - update the notes yourself
  - Automatic, github will show what was pushed

- Make sure we are consistently making commits.
- Main branch is the only one that will be looked at
-
- Create directory structure before adding our own branches - i can do this
  - Push this to github and then add branches
- Priority list of functionalities → table for each necessary components
  - Think about functionalities and make sure that the tables can actually support these
- Look at the responses of the apis as well as the description to make sure that we can access all of the required information needed
- Might need to get the database schema reviewed.

Assigned Sections

- Account info (1 person)
- Login
- Register
- Profile

Meeting 2

- Cloudinary (adding pictures)
- For next week:
  - Axel
    - Add create community page with functionality

- ○ Nabil
  - ■ Add basic calendar to the home page for each community the user is a part of
- ○ William
  - ■ Make it so that when a user joins a community or event, that is also stored within the database
    - ● Through userToCommunity and userToEvent
  - ■ Implement smaller features like the pop up message and others
- ○ Alen
  - ■ .List all the communities the user is apart of on the home page

- ○ Jacob
  - ■ .List all of your friends and their communities
  - ■ Implement a search user functionality
- ○ Luke
  - ■ Add communities and events view to profile page
  - ■ Fix users to users database functionality to implement friend list on profile page
  - ■ Add ability to view friends' profiles

Meeting 3

- ● For next week:
  - ○ Axel
    - ■ Add admin functionality so the person who creates the community has an admin role
    - ■ Functionality with that
    - ■ Constraints
    - ■ Css
  - ○ Nabil
    - ■ .create a full functioning calendar that switches between months, unique calendars for each
  - ○ Alen
    - ■ Add the ability for the user to press the community name and be taken to the community page
    - ■ Show the name and description
    - ■ Show members
  - ○ William

- Fix the message pop up that alerts the user that they successfully joined the community and event.
- Create the search filter bar that will allow the user to look up communities and events by name
- Create search buttons of each community's filter that will only load the communities with said filter.
- Add the community name that is hosting the event to each event
- Incorporate CSS
  - Jacob
    - Add a Calendar of your friends events
      - Be able to join and leave events from the calendar
    - Friend Request system
      - Different friend statuses
        - Sent
        - Pending
        - Friends
    - When you click on a friends community it brings you to that community page
  - Luke
    - .Add profile picture functionality with Cloudinary API
      - Allow users to upload their own photo for storage in the cloud with free tier API key
    - Fix bugs with friend profile views
    - Create separate ejs page for viewing other peoples profiles
      - (Friend vs my info)

Meeting 4

- Need slides including:
  - Names and descriptions
  - All the tools used
  - Rate all the tools that are used
- Some sort of architecture diagram
- List the challenges that you encountered.
- Add a future enhancements slides
- Demo for the project - have a backup
- Quick recording for the demo
